CONVENIENT—Designed for single use. Battery-powered, re-usable light source inserts in handle. After use, remove light source and discard blade and handle. A clean, new laryngoscope is always ready for instant use.

BRILLIANTLY ILLUMINATED—Light from re-usable light source in handle is transmitted through clear plastic light guide in blade, emanating as a flood of light near distal end. No lamp or wiring in blade. Light source uses long-life alkaline AA size batteries.

NO CROSS INFECTION DANGER—Eliminates costly cleaning.

GREAT STRENGTH—Blade and handle molded in one piece from structural plastic for strength and reliability.

TWO SIZES—Small, 77.5 mm. usable length x 18.2 mm. blade width; large, 123 mm. usable length x 25.7 mm. blade width.
